Vinyl Cutting:

Installing the Software:

The vinyl cutter is run by a separate computer, so you don't need to install any software onto your computer. However, you can use Inkscape (download link in above section) to create a design that will cut a little nicer.

Creating a Design:

While you can use any image for vinyl cutting, the cutter will work much better if you choose a high contrast image with only one or two colors. This is not a problem if you choose to create your design in Inkscape, however.

Do (few colors, high contrast)

Don't (many colors, low contrast)
(Source)

Setting up the Vinyl Cutter:

In order to set up the Vinyl cutter, first choose the color to cut your t-shirt in. Then, if that color is not already loaded into the Vinyl Cutter, [Add more info here later]

Printing your Design:
